## DNA/RNA extraction range

### High quality and consistency for sample preparation

Ahlstrom-Munksjö DNA/RNA extraction portfolio is suitable for the extraction of DNA/RNA from samples in spin columns technology and microchips.

These products consist of pure binder-free glass microfibers made into a filter with ultrapure water and characterized by retention of very fine particles.

Our media is incorporated in spin columns and microchips to retain DNA/RNA under specific pH and salt conditions from a very small amount of cells. Contaminants are removed using a wash buffer and the purified genomic DNA is eluted in a low salt Elution Buffer and the purified total RNA is eluted in RNase-free Water.

Each media is specifically selected for ensuring high quality and consistency. Close surveillance in tightly controlled conditions provides the highest uniformity, consistency and smoothness of the final products in all grades.

### Main features and benefits

- Made of high purity borosilicate
- Manufactured in EU and US
- Biologically inert and resistant to most chemicals
- Media can be incorporated in spin columns and microchips
- Smooth flow and rapid processing of samples
- Wide range of filter diameters and formats available on demand
- Only one step required in the manufacturing process for inserting the media in spin columns

### Primary applications

- Next generation sequencing sample preparation
- DNA/RNA extraction
- Plasmid, viral and genomic DNA
- Regular PCR purification

## Microglass media

Ahlstrom-Munksjö microglass DNA/RNA portfolio is produced in a wide range of grammage, thickness and absorption levels to allow efficient binding of DNA and RNA, while providing smooth flow and rapid processing of samples. MGI502 provides an higher binding of nucleic acids due to its innovative double layer glass fiber membrane.

## EMEA/APAC offering

Grade	Single/Double	Grammage g/m <sup>2</sup>	Retention µm
MGB	Single	143	1
MGD	Single	120	2.7
MGF	Single	75	0.7
MG 1502	Double	142	10 - 1

## NA offering

Grade	Single/Double	Grammage g/m <sup>2</sup>	Retention µm
I21	Single	144	1
I41	Single	123	3.1
I51	Single	88	0.7
MG 1502	Double	132	10 - 1

The choice of grade depends on the composition of the treatment solution and the sample type to be eluted (DNA/RNA)
