Seed Testing Paper

Ahlstrom-Munksjö offers non-toxic papers for use in the seed industry and agricultural research laboratories.

Seed testing papers are made of cotton linters and/or pure cellulose; they do not contain any substances which could influence the growth of seeding. The pH range is between 6.0 and 7.5. The special structure prevents fine seed roots from growing through the paper.

A broad weight range enables the seed technician to maintain the required moisture level for the whole duration of germination test period.

The filter papers can be supplied in a variety of formats and are available in white and three shades of blue and yellow colored paper to make the evaluation of fine roots easier.

Papers comply with ISTA (International Seed Testing Association) and AOSA (Association for official seed analysis) requirements.

We offer various formats for each procedure:

- TP: Top of paper
- BP: Between the paper
- PP: Pleated paper

- High purity cellulose grades
- Highest intra and inter-lot consistency
- Wide range of white and colored papers
- Comply with ISTA and AOSA requirements
- Customized sizes and shapes available
